

To make the requirements more clear and detailed, positive test scenarios and negative test scenarios are listed as follows:

- Positive Test Scenarios should be able to:
 - Sign in and Sign out for LinkedIn (P1)
 - Regularly Search for certain people or company (P1)
 - Advanced Search for certain people or company (P2)
 - Send and Receive request from others (P1)
 - Delete friends from existing list (P2)
 - Share an update (P1)
 - Upload a photo (P1)
 - Publish a post (P1)
 - Improve your profile (P1)
- Negative Test Scenarios should be able to:
 - Sign In with wrong username or password or without either of them (The application should be able to remind user that this account can not log in without valid username and password) (P1)
 - Send request with incomplete information and get rejected by the application (P1)
 - Regular Search for certain people or company with “result not found” (P1)

For each test scenario, test flow graph and relative test document need to be created in order to guide the automation test.
