Goals of the Project

- Design my own Test LinkedIn Website Automation Framework, including automated test execution (using J-Unit), prioritization (using Category) and provide test report (using Surefire).

- Follow the guiding documents to build the cross-browse framework.

- Share experience on how to make the framework easy-to-maintain and expansible, so that the framework can be reused later by others

- Get familiar with test flow diagram, path-based testing and positive/negative testing.
